Abstract

DeFi replacing the entire traditional finance is not far away. Even though DeFi 1.0 is the root cause for the modernization of finance, the market is skyrocketing towards a new height.

Acura Network revolutionizes decentralized exchanges with DeFi 2.0. Acura's DeFi model is way better than DeFi 1.0 models like Pancakeswap and Uniwap. Acura Network offers a variety of tools including but not limited to pricebotTG and price alerts for a smooth and better DeFi experience. Acura Network offers insight tools and enormous amounts of data for enhanced decision making, and deep market analytics to know every possible detail about a DeFi project.

Acura Network is the world's first redefined decentralized trading platform and auto generating liquidity protocol powered by Polygon.

Problem Statement

Getting started with DeFi is the biggest challenge for beginners in the industry. The Defi world is young, and Decentralized exchanges lack the necessary analytical data and required tools that enable an efficient and optimized trade. There is a need for the correct analytical data and functions to minimize blind trading and equip people to make DeFi more secure, more intuitive, and more predictable.

When you are getting your feet wet with crypto, trading could be really risky without an in-depth analysis of market trends. One wrong move at the beginning might put an end to your crypto journey. The risks are due to the market that widens daily and comes full of uncertainties.

New investors and traders need a platform where they can trade, analyse and strategies in the one hub without changing to other sites

Acura Network - Key Features

An auto generating liquidity protocol and decentralised exchange Revolutionised with a facelift and charts.

Acura Offers limit orders, stop loss orders, and order book and more.

Offering a whole suite for traders, new investors and businesses with yield aggregated farms, staking pools, price bots, and project index

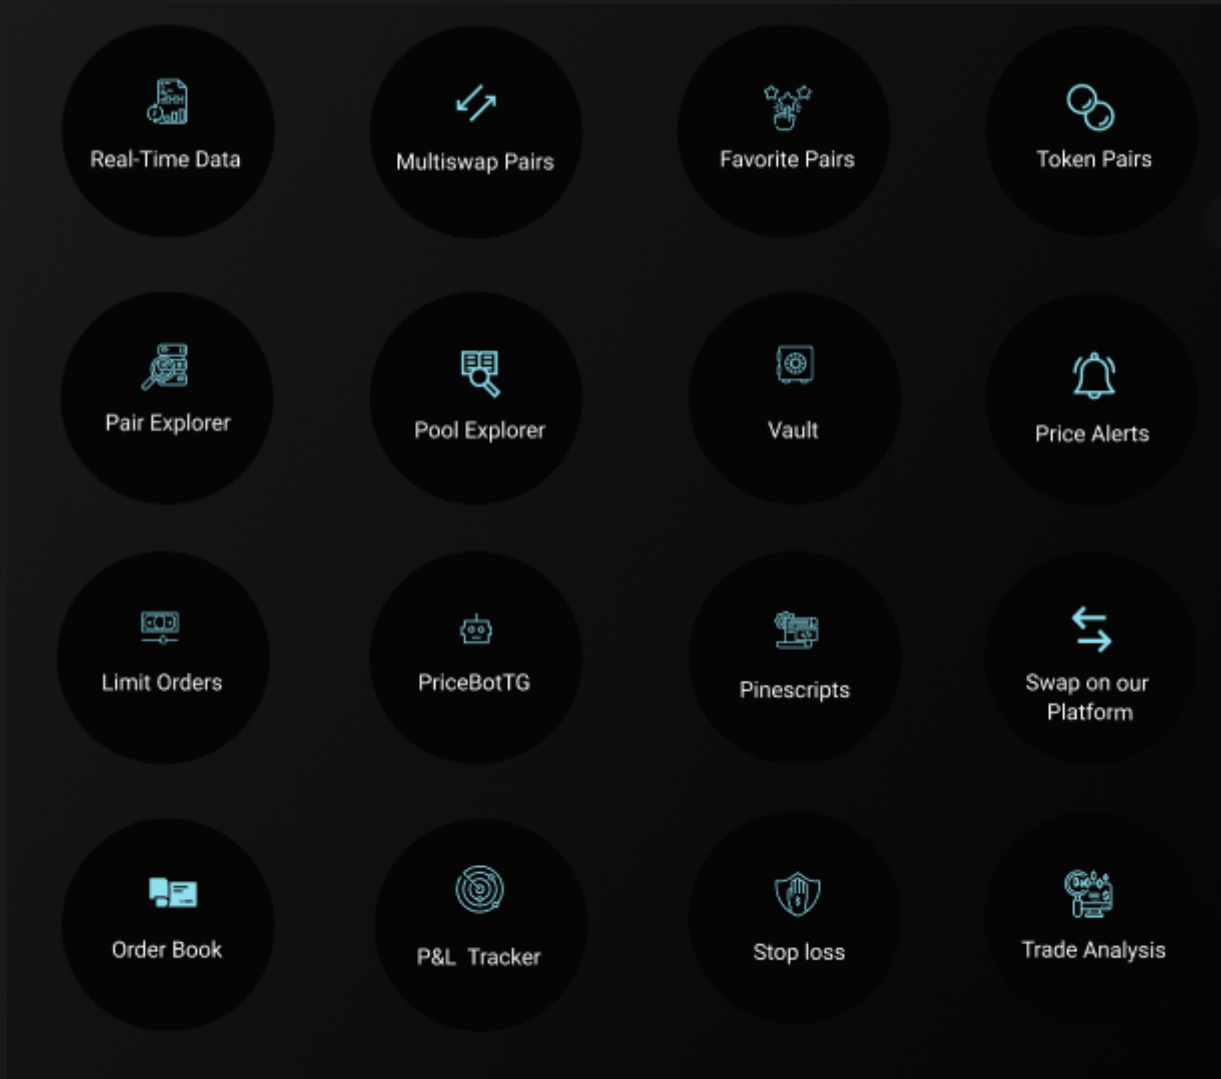

Need For Trading Data

What if you can trade analyze and execute all of your trading strategies, regardless of the platforms they are deployed on, under a roof? Acura Network allows you to trade seamlessly, access and assess various staking pools, yield farming applications, and a multitude of project attributed in one place with incredible ease. DeFi platforms when approached strategically can make the year-long movements in stock markets occur in minutes.

With the mass adoption of cryptocurrency among the developed and underdeveloped countries, there are many advancements made in the cryptocurrency space, which includes some ease in the regulations and KYC to make it easy for the entrants. The tedious ICOs were replaced by simpler and faster IEOs. So, the pace at which one can enter emergent projects is significant to maximize the benefits.

Since DeFi being the new normal, one needs to make quick and meaningful decisions in real-time regarding the happenings in the decentralized markets. Since the existing tools in the market failed to provide valuable insights on the projects, Acura Network created by industry experts aim at providing real-time pieces of information to help the entrants.

Acura Network - What it offers

Acura Network - The Potential Solution

Acura Network is the Decentralised exchange protocol and platform you need that offers an enabled trading experience with insight tools on the one application. Acura equips users with accurate, fast, and efficient chart viewings, a direct swap protocol, transaction limits and stop-loss orders, precise order books, necessary explorers and socially uploaded technical analysis, and a project index list. Acura ultimately scales and redefines the way DeFi is utilized by enhancing interoperability and equipping users with an all-in-one Protocol.

Acura is an auto-generating liquidity protocol with the automated market-making swap to directly trade-off its platform while observing necessary charts related to that project as well as being able to search information for it on the projEX tab. Acura Network is the first Decentralised exchange to implement the full function of limit orders, stop loss, order book while still being able to trade other tokens.

Mission And Vision

Polytool aims to convert the data offered by blockchain and other APIs to easily interpretable graphics in a fast and intuitive manner. It is practically impossible for any investor to search the data manually and process them for an insightful decision. This might a too much time than you think it would. Acura Network make it easy for you to do the interpretations and data analysis itself. The following are the features that make Acura Network stands out from the crowd

* Acura Network offers real-time data from the APIs, including the date of token creation, market capitalization, and trading volumes of the tokens.

* The buy and sell history shows the wallets associated with them and these wallets are visible to the public, thereby investors can predict the next moves of other investors and can be benefitted a lot.

* Acura Network really cares for the investor's hard-earned money. The algorithms used by Acura Network can easily detect the scams by pointing out fraudulent, and suspicious tokens.

* Acura Network help you detect the big market movements well advanced, which helps the investors safeguard their funds by putting them in stablecoins and can re-enter the market when there is a good capital flow and liquidity.

Acura Network - Working

The penultimate aim of Acura Network is to take the fruits of decentralization to everyone unmindful of their financial climate. The UI/UX of Acura Network is designed really simple to grant access to everyone. The Acura Network platform is compatible with every device and it can be switched from mobile to desktop. The Acura Network users can purchase the Acura Network token from the exchange and use them for paying the subscription of Acura Network.

In addition to these features, Acura Network also allows the users to store data and access them from any device. Multiple-device support makes Acura Network a reliable network and it also eliminates the need for the transfer of data. The investors can set alerts to notify them of the changes in their desirable exchange or platform.

Better Trading Experience

DeFi 1.0 such as uniswap has a very basic UI that causes blind trading and is not adaptable. Acura Network is designed with the ultimate aim of helping the investors trading in DeFi platforms, with the provision of proper DeFi tools, valuable insights, and unique data analytics. Acura Network enhances the DeFi experience of the investors as it has many functions that assist trading in its own swapping platform.

Acura Network puts all the analytical tools and data analytic functions in one place, which makes it seamless for the investors to track the performance of an asset or a market with the click of a button. Acura Network also offers easy strategy making that helps anticipate dumps.

Why Polygon Matic?

Polygon is an answer to some of the major challenges that face Ethereum today — such as high fees, poor user experience, and low transaction throughput. A small transaction in the ethereum blockchain might cost a few hundred dollars, making it unaffordable for small-scale and home-based investors. The growing nature of Defi on the polygon is rapid, but without necessary charts or tools, an investor may struggle in investment optimization. This is where Acura Network fits in.

Acura's DeFi 2.0 redefines the current DeFi trading experience by entailing an all-in-one order, trade, analyze, stake, learn about projects. A refreshed engine, new databases, exquisite UI/UX, easy to use all in one liquidity generating platform. Acura's cross-chain network and ecosystem will allow bridging and cross-chain to other networks, all at low costs, and efficient speeds.

Acura Network - Tokens

\$ACURA ensure stability through the deflationary and burning mechanism.

TOKEN NAME : Acura

SEED SALE : \$162,000

TOKEN SYMBOL : ACURA

STRATEGIC SALE : \$450,000

TOTAL SUPPLY : 1,000,000,000

PRIVATE SALE : \$192,000

PUBLIC SALE : \$180,000

TOTAL HARD CAP : \$984,000

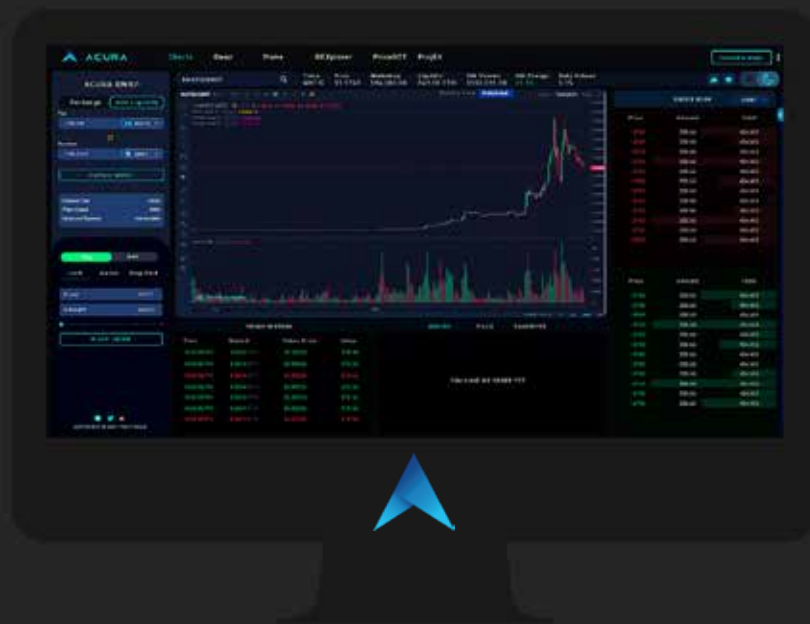

INITIAL MARKET CAP : \$249,000

CIRCULATING SUPPLY : 4.15%

Acura Network - Smart Trading

Our platform is available for all users rendering limited use. In order to receive exclusive access to our incredible service options constituting greater growth for your portfolio; you must be in possession of a pre-determined amount of our native token or subscribe to our monthly-based service option.

We aim to incorporate further development with future integrations for our platform; enduring price appreciation and improvised services.

AcuraBot

The Telegram Price bot your project needs. View and manage your telegram Price bot for your telegram channel, displaying your chosen features such as token Name, token price, total supply, chosen pair, market cap all powered by Acura. AcuraBot is a highly convenient price action bot based on Polygon for cryptocurrency Telegram channels. AcuraBot fetches data from various sources to give a channel subscriber live price action.

Since Dex trading is very fast-paced and needs an immediate update on the price and detail, Acura Network found telegram to be the perfect place to build the AcursBot, a price action bot that could feed users with immense details. The ultimate purpose of AcuraBot is to show live price action trades within the telegram channels.

AcuraBot allows the projects and groups to install the bot and have instant information about prices, liquidity, and the chart of the tokens. The bot also includes a DEXplorer link to the pair. AcuraBot also offers subscriber help, enhanced transparency, and the opportunity to find the next revolutionary token. When following AcuraBot price action channels, all trades will automatically populate in real-time. Many large trades from the price action channels will be shared across bigger cryptocurrency communities, which makes our reach even stronger.

DEXplorer - Pool and Pair Explorer

DEXplorer is the explorer you need to view Pools, Pairs, and APR/APY exclusive to selected dexes all at the click of a button. DEXplorer allows you to follow the best pairs through this tool with real-time graphics and transactions, add your pairs to favorites, and much more. DEXplorer helps you determine pool amounts and total liquidity at a glance, and to identify the most promising LP opportunities. DEXplorer's user-friendly UI enables the users to find the best liquidity mining and staking option in the market.

You can view liquidity and volume information for token pairs, verify contracts more easily and tag your frequently traded tokens and pairs as the favorite for easy access.

If you want to get access to information related to liquidity and specific trading pairs, then the DEXplorer is the right tool to use. The pool explorer is also sharing warnings and ratings in order to get data on possible scams and also hidden gems.

The pair explorer feature allows traders to get information in real-time of pool addresses, charts, prices, and more. This is great for those users that want to do technical analysis of specific trading pairs on DeFi exchanges.

Roadmap

Q4 2021

Implementation of oscillator widgets

Guide to guide tutorials on pine script and oscillator usages

Limit orders for Dexes.

Bot implementation on telegram from price alerts for polygon supported projects

additional dex support on Ethereum with scaled charts.

pairs and pools explorer

Q1 2022

Adoption of other Dexes from other platforms with multiple chart views and multiple swaps

Profit and loss tracker with notification alerts.

Mobile app/wallet for holding your tokens securely powered by matic and Ethereum.

Earn multiple rewards for using Acura Network Wallet

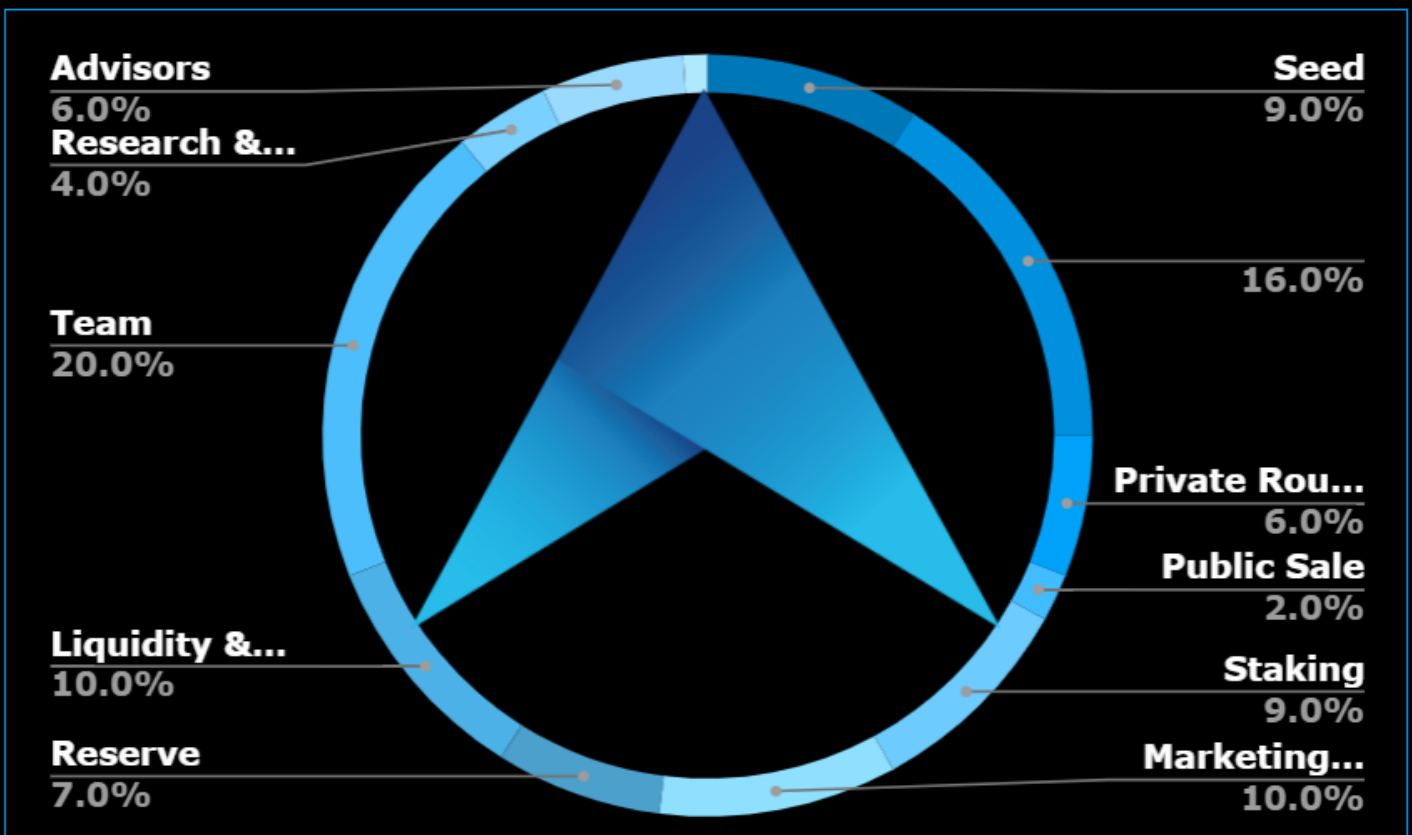

Chart integrations/limit orders and trading in our Mobile dapp.

Mobile alerts for drastic price changes in tokens.

Acura Network - Token Allocation

Allocation	Percentage	Vesting	Price	Lock-up Period
Seed	9.00%	2 month lock, followed by daily linear vesting For 16 months	\$0.0050	1.5 years
Strategic Round	16.00%	1 Month lock, then daily linear vesting for 11 months	\$0.0065	1 Year
Private Round	6.00%	5% at TGE, after 1 month daily linear vesting for 8 months	\$0.0085	9 months
Public Sale	2.00%	TGE - Unlocked	\$0.0100	-
Staking	9.00%	-	-	-
Marketing & Partners	10.00%	2 month lock then, 3.5% at month 3, Then daily vesting for 2 years	-	2 years
Reserve	7.00%	Locked for 1 year	-	-
Liquidity & Pools	10.00%	-	-	-
Team	20.00%	6 Months Cliff then 10% quarterly	-	3 years
Research & Development	4.00%	2 month lock, then 2.5% at month 3 then daily vesting for 2 years	-	2 Years
Advisors	6.00%	3 Month Cliff, then daily vesting for 2 years	-	2 years
Market Maker	1.00%	-	-	-

Acura Network - Token Distribution

\$ACURA Market Cap Evaluation

Stage	Token Price	Funds 100% Raised	Mcap @ Round
Seed	\$0.0050	\$450,000	\$115,000
Strategic Round	\$0.0065	\$1,040,000	\$149,500
Private Sale	\$0.0085	\$510,000	\$195,500
Public Sale	\$0.0100	\$200,000	\$230,000
